JOHN MORRIS, Agent.
Albion Wharf (foot of Market-street). 3629

SYDNEY FIRE INSURANCE COMPANY.
Chairman, T. W. Smart, Esq., Deputy Chairman, Charles Kemp, Esq., Directors, Robert Jones, Esq., J. B. Morris, Esq., Thos. Holt, Junr., Esq., W. B. Scott, Esq., Surveyor, James Hume, Esq., Secretary, George King, Esq.

The Directors of the Sydney Fire Insurance Company call the attention of the public to the following reduced Scale of their Rates of Premium:

Section A.—Slated buildings, 6s. to 12s. per cent.
Section B.—Shingled buildings, 8s. to 18s. per cent.
Section C.—Weather-boarded buildings, 15s. to 30s. per cent.

FIFTEEN PER CENT. of the Premium will be returned on the renewal, for twelve months, on all yearly policies, so that the actual cost of Insurance will be ONE-HALF only of the above rates at a few days.

This Company is established upon the principles of the Saxo Gothia Company, which is one of the leading and most popular Fire Insurance Companies in Germany, and which established, on the occasion of the great fire in Hamburg, the soundness of its principles. It then paid all losses in full without inconvenience to its members.

All parties desirous of insuring in this Company may satisfy themselves by previous inspection of the register book as to the ability of members to make good the amount of their respective contributions.

Application for Insurance to be made to the Secretary, at the office of the Company, No. 387, Pitt-street.

GEORGE KING, Secretary.
N.B.—In case of fire, parties are requested to give notice to Mr. T. J. Bowen, Engineer, No. 286, George-street, Superintendent of the Fire Brigade, in whose premises the engine is kept.

No. 52-57. Town Clerk's Office, Sydney, 10th November, 1852.

ELECTION OF AUDITORS AND ASSESSORS.
NOTICE is hereby given, that the annual election of Auditors and Assessors for the City of Sydney will be held before the Aldermen and Assessors of the various Wards, on Monday, the 15th day of November instant, at the places undermentioned, viz.:

Gipps Ward.—A booth, Port Phillip Hill, Bourke Ward.—Court of Requests, Bent-street, Brisbane Ward.—Police Office, George-street, Macquarie Ward.—Alderman Brown's Office, Cook Ward.—Court House, Darlinghurst, Phillip Ward.—Haymarket, Campbell-street.

The polling will commence at 9 o'clock in the forenoon, and finally close at 4 o'clock in the afternoon of the same day.

By order of the Right Worshipful the Mayor, **JOHN RAE, Town Clerk.**

NOTICE.
AUSTRALIAN JOINT STOCK BANK.
ATTENDANCE daily at the Company's Temporary Office from 11 to 3 o'clock, to receive application for Shares.

WILLIAM CLARK, Secretary pro tem.
Exchange Buildings, November 1. 3731

AUSTRALIAN JOINT STOCK BANK.
THE allotment of shares takes place on Monday next, the 15th instant, and the temporary office will be open to receive applications daily, from 11 till 3 o'clock, until Saturday next, the 13th instant.

JAMES W. BLIGH, Honorary Secretary.
November 9. 3692

DISEASES of the URETHRA. Strictures, and Debility of the Raytes, M.R.C.S., and L.A.C.L. may be consulted as usual from 10 till 4 o'clock. Letters not answered unless they contain the usual consulting fee of £1. 25s. Castlereagh-street. 3698

OBSERVE! OBSERVE! OBSERVE!
MALCOM'S ROYAL AUSTRALIAN AMPHITHEATRE, York-street. Where can be witnessed a real Troupe, and no Monkey, Mole and Female Artists, both British and Foreign, whose unrivalled Equestrian Feats cannot be equalled in the Southern Hemisphere. The youthful aspirants for equestrian fame, the proprietor assures his patrons, stand unrivalled. No expense has been spared in the decoration and fitting of the Amphitheatre, as well as to secure the best artists that visit these colonies, as must be seen from the last arrival of Mr. G. W. Smith, from Astley's, London; and in addition to the Equestrian feats, the stage being open every evening, renders this favorable place of amusement a decided favourite, as must be seen from the nightly crowded houses. The stud of highly trained horses are decidedly beyond description. Come and see and judge for yourselves.

JOHN MALCOM, Proprietor.
November 9. 3748

OLYMPIC CIRCUS.
Never was applause more enthusiastic within the walls of an Arena than that received by Henry Burton's Company on the night of their opening at the Olympic.

HENRY BURTON'S TROUPE of Equestrian and Gymnastic Artists.
THIS EVENING.

Change of Programme each night. Go and see the Monkey, the world's wonder, MAJOR JOHN DOWNEY leaping gazelles, camels, &c.

The whole forming an entertainment unequalled. Doors open at 7; performance to commence at half-past 7.

Admission—Boxes, 3s.; Side, 2s.; Pit, 1s. each. Ring Master, Mr. Henry Burton, Clifton, Mr. S. T. Holmes. 3611

DAVID OGILVY, MARINE SURVEYOR, 480, GEORGE-STREET. 3606

OBSERVE! GOLD.
PHILLIPS, Aerial Clothing Establishment, 155, George-street, Brickfield Hill, opposite Woolpack Inn.

Just received, and on sale as above, a large number of Tents and Tarpaulins, from 22s. 6d. and upwards. Also, a great variety of miners' clothing. 3246

169, PITT-STREET SOUTH.
Nearly opposite the Congregational Church. **PARTIES** requiring good seasoned Bedding, at moderate charges, will do well to pay a visit to Johnson's Wholesale and Retail Bedding Warehouse, where they will find ready for immediate use every size in flax and well-seasoned Feathers, warranted clean and free from smell or impurities of any kind. Old Mattresses re-made. Feather Beds re-dressed and cleaned.

N.B.—Merchants, Captains, and the Trade supplied upon liberal terms. E. JOHNSON. (Late Thomas Britton.) 2948

F. S. GRAY, Ship and Commission Agent, 110, Pitt-street, South.
PASSENGERS enquiring to and from Adelaide, Sydney, and Van Diemen's Land in the first vessels. Freight engaged, goods shipped, GOLD BOUGHT or received from the Escort Office and forwarded to any of the Colonies or England, and steamers regularly despatched.

PRODUCE AND MERCHANDISE of all descriptions received, sold, and the proceeds remitted as instructed. References unexceptionable. 1298

MASON'S LIVERY AND COMMISSION STABLES.
YORK-STREET, SYDNEY. Opposite Entwhistle's Hotel.

THE Proprietor having made extensive alterations in the above premises, begs to inform the public in general and the interior, and the public in Sydney, that he is now enabled to execute all arrangements that may favour him with. All the arrangements are under his (Mr. M.'s) own immediate and personal superintendence, and he trusts therefore that his well known care and punctuality will ensure him their patronage and support.

N.B.—Shippers of horses liberally treated. The Mail and other steamers regularly despatched. Sydney, November 4. 3108

COMMISSION AND LIVERY STABLES.
(Late Armstrong's.)
Corner of Hunter and Castlereagh streets.

MR. CHARLES BOWLER, having taken those premises at the corner of Hunter and Castlereagh streets, so well known as Armstrong's Repository, begs to announce that he takes possession on the 15th instant, when he will carry on the Livery and Commission Sales Business for Horses and other Stock.

From the advertiser's long known connection with and management of Stock in various parts of the colony, he confidently hopes, with the superiority of his stabling (the most extensive in Sydney), and his own unremitting attention, to receive the support of his friends in particular, and the public generally.

To Gentlemen in the Interior Mr. Bowler begs to say he will be happy to give every information as to markets, &c., and they may depend on his strenuous exertions to procure the highest prices for Stock consigned to him for sale.

References have been kindly permitted by the advertiser to the several gentlemen who have been successful in the sale of their horses, and who can be consulted as to the value of the Stock.

Samuel P. Milford, Esq., Master in Equity; Thomas Hall, Junr., Esq., George-street, Sydney; Dr. Markham, J. P., Armidale, New England. 3395

The Sea-side brought home to those who cannot visit it. Extensively used and recommended by the most eminent of the Faculty.

COLE'S ALGA MARINA.
An unfailing external remedy in all cases of debility and weakness in the joints, relaxation of the ligaments, contraction of the tendons, deformities of the spine or limbs, paralysis, rickets, scrofulous enlargements of the glands, bronchitis, tumours, various venia, swellings, rheumatic and gouty contractions and concretions, or restoring the use of joints injured by recent strains or bruises, and for disordered circulation and the consequent effects of all injuries, burns, &c., for which this sea-side is usually recommended.

It has long been known to the attendants upon bathers in the sea, in many localities, that there is considerable virtue in the Juice of the Sea-weed when rubbed into the surface of the back and limbs of DELICATE CHILDREN, or the stiffened or relaxed joints of invalids in general; and although from the very diluted and otherwise inefficient form in which the medicinal properties of the plant can be derived from it is slight and uncertain, it has yet been sufficient to encourage the practice, and in the absence of a more effectual method of using it, to render the sea popular among the frequenters of the sea coast.

The attention of the discoverer of Cole's Alga Marina was some years ago attracted to the possibility of improving upon this rude method of using the remedy, and of increasing its powers of doing good. After a long series of patient investigation and experiment, this object was accomplished so as to remedy his most sanguine expectations, and a second was discovered far transcending all others in virtue for a numerous class of diseases, which had hitherto been considered almost without the pale of benefit, and for which such a specific had long been sought for in vain. Cole's Alga Marina has borne the test of several years' experience in extensive private practice, during which period it is well known that he has contributed in no small degree to the success as well as to the fame of his discoverer, and it is solely on account of the daily increasing demand made for it by those who have experienced or been made acquainted with its virtues, that it is made public, and sold at a price which places it within the reach of all classes.

On sale, by appointment, by **FOSS, SON, AND CO., Dispensing Chemists, &c., 313, Pitt-street North.** 3748

NOTICE OF REMOVAL.

JONES AND SMITH, late H. Isler's, Tailors and Clothiers, beg to inform their friends and the public, that they have removed their business from Pitt-street, opposite the Union Bank, to 459, George-street, opposite Hunter-street.

November, 1852. 3551

[illegible]

lecturer introduced his very interesting remarks by a reference to mistakes which were occurring with reference to the necessity which consequently

The various modes of extracting the metal would involve upon his colleagues in his duty being simple to the properties of the precious metals by which it might be distinguished. Referring,

to the properties of gold, the most unchangeable of all metals, stamped it at once as the most durable. Its ductility was a point of importance; indeed, so ductile might be beaten out into thin sheets, 232,000 of an inch thick;

gold could be beaten out into
are inches, or might be drawn
0 feet in length. The density
as also peculiar, its specific
out 194 times heavier than
our of gold varied from the

blue, violet, black, and even
and in minute divisions. The
stability of gold was very high,
and it volatilized very slowly.
A review the physical proper-

view the chemical properties
mental, he said, was dis-

s-page1508787

page 15007 of 15

of which all others by not being capable
 of being dissolved in aqua fortis, its only sol-
 vent being chlorine. The only modes by which
 gold could be dissolved were, by aqua regia,
 by chlorine, by sulphuric acid, and ordinary
 bleaching powder, and by nitric acid. In
 the use of nitric acid, the solution thus formed
 was called aqua regia. Proceeding from
 the chemical properties of gold, the lecturer
 next described the various tests for this val-
 uable metal. The first and most generally
 adopted was the test by touchstones, which
 attention was drawn to, however, were somewhat
 fallacious ones—the touchstones and the
 nitric acid. One part of sulphate of iron—
 green vitriol—produced a precipitate which
 was brown by reflection and blue by trans-
 mission of light. So accurate, indeed, was this
 test that one part in 640,000 parts of water
 might be detected. Another mode of testing
 the metal was by salts of tin, or of iron, as
 was commonly known as the test of Cassius.
 A small quantity of common soda ash, added to
 the solution of gold, and boiled with an ordi-
 nary nitellid powder, would produce a pre-
 cipitate of a black powder, which would easily
 prove the presence of gold. Oxalic acid, tar-
 taric acid, and soda, or other organic com-
 pounds, would also produce a black precipi-
 tate. Another mode referred to was that of
 producing an amalgam with gold and mercury,
 and several very interesting experiments were
 given of the affinity of gold for quicksilver,
 and the mercury flying off at a lower heat,
 leaving the gold behind, in a manner analogous
 to that adopted in gilding. In searching for gold,
 however, the emigrant was to be careful not to
 mix silver and platinum. The specific grav-
 ity of the first named metal was 19.4; it was
 soluble in nitric and sulphuric acid, the
 simplest test was that of common salt. The
 specific gravity of platinum was 21.5, and it was
 an extremely useful and valuable metal, and
 one which he would advise emigrants to look
 for. Like gold, it was soluble only in aqua
 regia, or solvents similar to those used in gold;
 the tests for it were nitric acid, tartaric acid, and
 soda, and crocus acid, tartaric acid, and soda.
 Platinum was a metal which he had no
 doubt would be found to a considerable
 extent in Australia, and he earnestly advised
 the emigrants to look after it. The lecturer
 then proceeded to call attention to the
 substances popularly mistaken for gold, and
 which consisted principally of yellow mica,
 and of iron and copper pyrites. A mode of
 detecting iron pyrites was by the use of
 vitriol, the ore upon an iron shovel,
 and a small of sulphur would be given
 off, and the residue would assume
 the appearance of iron rust; or
 some of the powder placed on a bright sil-
 ver, and heated over the flame of a candle,
 would produce the same disagreeable smell,
 and would also blacken the silver. Copper
 pyrites would easily dissolve in hydrochloric
 or nitric acid, and some iron rust a piece
 of iron hoop would be dissolved in the so-
 lution, would speedily be covered with a
 copper precipitate. Ammonia and prussiate of
 potash were also infallible tests of copper
 pyrites. Yellow mica, the learned lecturer
 said, was frequently mistaken for gold, but
 with the exception of the colour, it pos-
 sessed no property similar to that of gold. An
 instance had recently occurred in which a
 captain of one of the guano vessels found
 some of the mica on the coast of Peru. The
 crew of the vessel took brooms and swept the
 substance into bags, and freighted the vessel
 with it. On arriving at Plymouth, two vendors
 of the precious metals went on board the ves-
 sel, and after having examined the substance
 sold, brought a sample of the cargo to the
 Museum of Practical Geology, to have it
 assayed. His companion, however, desirous
 of making a march upon him, went on board
 the vessel, and having examined the substance
 of the vessel, in which there was not a single
 ounce of gold—the bitter being, therefore, bit
 in this instance. The learned Doctor also pro-
 duced a box, which he said had been carefully
 examined by the learned lecturer, and found
 to contain certain portions of gold, but
 which, upon analysis, turned out to be per-
 fectly worthless. After having described in a
 very interesting manner the mode of conduct-
 ing the assay of the ore, he proceeded to
 contain certain portions of gold, the
 learned lecturer concluded his
 very able and interesting remarks as follows:—
 I have now endeavoured to impart to you the
 results of my researches into the history of the
 precious metals, and I trust that the knowledge
 may occasionally prove useful. You are now
 aided upon by one of the eventful periods
 which have occurred in the history of many
 nations, and I trust that the knowledge of
 the sources, impelled by a desire to obtain
 wealth by pursuing its direct representation.
 The desire to attain gold, which caused so
 rapid a stream of emigration from America
 to Australia, and now produces so large a flow
 from the latter to the former, has been the
 repetition of a desire which at all times in
 human history has exerted a most important
 influence in the advance of civilization, and
 in the development of the human mind.
 This desire became the passionate madness of
 philosophers and of nations for a thousand
 years, and has left its records in the history of
 antiquity. It passed over the world like an
 epidemic, and has been the cause of the most
 disastrous and cruel wars, and has been the
 cause of the most terrible and cruel wars, and
 has been the cause of the most terrible and
 cruel wars, and has been the cause of the
 most terrible and cruel wars, and has been
 the cause of the most terrible and cruel wars,

But more important in their return, and more useful to the every-day comfort of the rank and file, is the sense of being unranked. Recollect, then, that while we hail with pleasure, as all history justifies us in doing, the desire for gold which forces so many of our countrymen to the mines, the philosopher also tells us, that the consequent good which generally arises from collateral causes rather than from the one which produced the original impulse; and that, though disappointed in the search for gold, the philosopher can see only the philosopher's stone in the drifts and quartz of the gold regions, those who read God's teachings as displayed in nature will find a more sure way of transmitting valuable treasure than gold by going with the desire to improve and develop the natural resources of their adopted home, in the true belief that success will attend their efforts. They avail themselves of that knowledge of the laws of nature which God has given to his creatures to attain, with a view to advance their comfort and happiness in this world. (Direct applause.)

NOTES ON JAPAN.

[illegible]

and some beasts and birds. The Emperor, it is said, often sends criminals to the valley to bring away a precious gem of inestimable value, and the bones of men also whiten its deadly sides.

At Aomori, lakes and thermal springs are common throughout several of the islands.

Their great source of opulence are their mines of gold and silver, but they have no antimony, calomine, sal ammoniac, borax, or arsenic, (quicksilver). These articles are in demand for their high price.

Every kind of poultry are plentiful: camphor trees are abundant, and the cedar are the finest in the world. Few countries are open so far to the sea. Islands of Japan for botanical and zoological research are numerous. We have here to enter into a detailed statistical account of the commerce of Japan. A direct trade to that empire would increase the commerce of this country about 200,000,000 dollars annually, if not more.

It has always been in contemplation with this country to make an effort to open a direct

trade with Japan. Commodore Porter, as far as the subject of the war is concerned, is Mr. Norron's on the subject. It was intended to fit out a frigate and two sloops of war and place them under his command, but subsequent events prevented the consummation of this design, but it has been revived from time to time and is being carried out. But a few years ago the undersigned drew the attention of Hon. J. Y. Mason to the subject by the recommendation of a steam line to China, with a view of incidental commercial intercourse, and the result was that Japan was required to permit small efforts to be made to establish commercial intercourse with so shrewd a people as the Japanese, who are alive to commercial feelings. A steam line direct from New York to the Isthmus being already in existence, it was not deemed expedient to open the Pacific, which islands abound in coal; thence to the Marquesas, and on to Shanghai or Jeddo. W. D. PORTER.

YOUNG AMERICA'S POSITION ON THE

[illegible]

Three top-boots, old horn-headed walking-canes, and pig-tail quivers are every department, mission, consulate, and clerkship. Let us know the sweeping sum total estimate of plunder, that with a sponge we may wipe the whole thing out, and have done with it. They for 32—10 old years began two hundred millions in cash, and the rule of the country for four years—for four years I—(hear the vendor)—and pickings—in charity, to piece them and get their blessing! Marry, time up!—I don't carry the our annual cash-book. It would fly. It will not do!"

ST. PETER'S.
(*From Art and Nature under an Italian Sky.*)
What might Gibbon pronounce St. Peter's "the most magnificent and the most ruinous" for the purpose of religious worship. At each successive visit it has grown upon us in vastness and beauty, until we have felt as though the idea of it were becoming too vast for the million of people who enter and were almost applicable to other edifices. The only

hend its real m
ance, as one does

various details are usually estimated by some formal measurement. For example, one may estimate the height and width of the door or entrance, and then compare the height that the breadth, length, and height of its architectural parts will be in proportion; and these we comprehend accordingly with tolerable correctness. It is true that here also these proportions, which are so beautiful and beautiful and faultless exactness. But then, the first step the mind has to take—the actual proportions of the entrance itself, or of whatever it is to be compared with—is so stupendous, so far beyond anything that the eye is constantly deceived. In the well-known instance of the white marble cherubs supporting the dome of St. Peter's, on each side near the entrance, I never doubted, at first glance, that they were of the ordinary size of children, which they represent; yet on near inspection we found them at least seven feet high, more than double the size of the infancy, more massive than three grown men. And so through all its wondrous details. There are figures of the Evangelists in mosaic, round the lower compartment of the dome, and yet the exact length of the larger than life, and yet the exact length of the smaller. St. Luke holds in his hand, is five and a half feet. Again, there is the magnificent Baldacchino or canopy, of bronze gilt, of rich and exquisite work, rising from the dome over the high altar, and some thirty feet high. As you enter the building at the further end, this structure appears the size of an ordinary pulpit; it would never occur to one as being the work of the great Michelangelo. Baldacchino is ninety-two feet above the level of the pavement on which you stand—as high as many of our common church spires! This deception of the eye readily accounts for the fact that the interior of St. Peter's, on many minds, till after repeated visits, leaves the impression that the overwhelming feeling of greatness which one might expect. There is one peculiarity, however, which at once strikes the eye, and which is so beautiful and so great, I think, in realising the vastness of the space—and that is the purity and freeness of the atmosphere. Unlike ordinary churches or halls of the largest dimensions, there is no confined air, nor any peculiar smell of the materials of which it is composed. All is too distant and open for this. The interior of St. Peter's has a climate, so to speak, of its own; it is never too hot or too cold, and the breeze from the very immensity of its space is a soothing stillness—a calm in its atmosphere, which no sudden draughts or currents can disturb. No matter what may be the season, whether winter or summer, within this world of beauty and beneath this firmament of glowing colours and golden splendour, the seasons seem to know no change, the subdued and softened atmosphere, over the same grateful soothing to the senses.

[The exterior of St. Peter's is not so grand and imposing as the interior. The genius of the great architect, has so beautifully adapted the exterior to the interior, that the effect is such perfect harmony in the whole design, that the magnificent size of the cathedral is not at first appreciated. From the interior, the true proportions of this wonderful structure are more readily grasped. The following account of her impressions on viewing the cathedral from the galleries above the dome.]

In the first place, you do not, as in ordinary buildings, moment flights of common steps, appearing to be a great deal more than the actual number as from their laborious steepness and a dark and stifling staircase; but you walk easily and agreeably upwards by a broad paved road, constructed a *cordon*, well marked, and the steps are so arranged, that the passage of a horse wagon, and of a gentle ascent that a laden constantly go up and down with their burdens. Arrived upon the principal roof, the scene presents a view of the most beautiful village of implements, heaps of materials, a fountain of water constantly flowing, and all other symptoms of complete domestication, and permanent habitation. The sphere, seem to have nothing to do with the architecture. We traversed the immense fields of lead, we recalled, and quite understood what the American author Cooper says, in his account of the interior of St. Peter's, the idea of having a horse to gallop about upon it.

From this plain the three domes arise. The two side ones, which are not seen from immediately below, rise above it to the height of about thirty feet. The central dome, which would of itself, be a very fine dome, proportioned to a large church; but they are insignificant beside that which rises in the centre like a little mountain from the plain. Its architecture is so perfect, that it is almost impossible to me to absolutely perfect, can only be judged of here; as indeed, the size of the dome can only be; for besides that it is double, and that the interior of the inner one (which the outer one is much larger than) is much more magnificent below, inside the Church, the extent to which the roof stretches on every side, prevents the base of the outer dome from being seen at all, except from considerable distance.

The broad, low dome, which is not so far from the plain to reach the architectural mountain we had still to climb. A long series of short flights of steps, and narrow passages of ascent, led us up to the top of the dome. About half way up, the ciccone ushered us by a doorway upon a raised gallery, which opens upon, and runs round the interior. It is a moment and a position this, I think, that the eye is so much attracted to the dullest imagination. Not that there is the slight danger, for the gallery is broad, and a high substantial railing prevents the possibility of a fall; but the stupendous spectacle which is presented to the eye, as you stand upon one, must inevitably produce a powerful impression of some kind. With me it was one of deep awe and solemnity, a feeling of overwhelming magnitude, as though everything around me were great and grand. The dome was preternaturally expanding—growing larger and larger even while one gazed, until the sensation became almost one of pain and suffocation. The dome was so vast and dim, round, which the mass of balustrade, and upon the opposite side like a slender cord. The mosaic figure forms, and faces, which from below look like delicate and softly-shaded features, and are so close together, as to be composed of large cubes of marble, fitted together and roughly coloured, while with huge limbs and gigantic features the forms depicted seem to glare upon the eye, and stretch out their arms and faces and greatness. For one moment I leant over the railing, and looked down, but oh, what words can describe the shuddering, yet fascinated wonder of the look and scene! Yet I looked more steadily and more intently, and the more I looked, the first glance an abyss of dim space and indistinctness; but a steeper gaze showed it to be one of beauty and of grandeur.

I believe the description as to height, as least, is correct. The impression of the appearance of objects below, it seemed more like looking down from a mountain of

housed less than a gallery of four hundred. There were some hundreds of people on the pavement below, yet the eye had to search for and fix itself upon the diminutive specks ere they could be distinctly recognised as such; and though these seemed moving across a field of vision, they were not to be taken as a portion of the whole area. From this point, the next stage of ascent is to another inside gallery of smaller circumference, at the very top of the dome, and at the foot of the conical-shaped roof. From this point, the eye has a new term. From this gallery we could but cast one hazy glimpse below. The dizzy, reeling vacancy into which the eye plunges, is almost maddening, and, I could imagine, might soon suggest the horrible idea of leaping over!

Monsieur Jean Pallegois, member of the Congregation of Foreign Missions, has arrived in Europe from Siam. He is charged by the King of Siam to deliver a message to the President of the Republic, and is about to bring out a dictionary in Latin-Siamese. His

present title is Bishop of Mallos, but he has for some time been acting as Bishop of Siam, and as the prelate of that see died recently, it is supposed that he will be named his successor. When Monseigneur Pallegoix first went to Siam, there were only 1500 Roman Catholics, and there are now upwards of 7000. The number of Priests composing his mission is fifteen, seven of them being natives. *Maignani.*

DIED.

At Pictou, on the 7th instant, at the residence of her son, Mr. Thomas Larkin, Sophia, widow of the late Mr. Nicholas Larkin, in her 80th year.

FUNERAL.—The Officers and Brothers of the Strangers' Home Lodge, and other Lodges in connection with the Independent Order of Odd Fellows, of the Manchester
